Apple TV Deployment Guide

Document Date: August 2020

This document will guide the installer through the deployment process for an Apple TV.

Wiring:

The Apple TV has 4 Connections

On The Back:

- Power
- HDMI
- Network

On The Front:

- IR Emitter

Setup:

Initial setup will allow you to setup ATV without AppleID and Pass

Video: Setup Resolution - Leave on Auto if you do not know

Audio: Go down to Format - If ATV is stand alone (not going through AV Distribution) set Audio Format - Change Format to Off

If ATV is going through distribution system, set Change Format to On and set New Format to Stereo

General: Go To Settings-General-Sleep After- set to Never

AirPlay: Go To Settings-AirPlay and HomeKit-AirPlay-Set to On and Allow Access to Everyone.

Update: Go To Settings-System-SoftwareUpdate and run the update if one is available.

The Apple TV is now ready for the User's Apple ID and Password. If we have it, we can set this up, if not, the end user can. We will need this setup in order to download the Streaming Apps.

Go To Settings-Users and Accounts to put in their AppleID
